What is Interoute One?

Interoute One allows you to manage your voice calls as easily as you manage your email. It makes unified communications easy, allowing you to share secure Instant Messaging (IM), presence and video calls with a large community of other users. Designed to be secure, Interoute One provides your business with all the benefits, but none of the compliance concerns. What's more, you'll get all the advantages that moving to VoIP brings, without any of the costs or pain that usually go with the migration.

There are a variety of options to choose from and each one offers free Internet calls to other Interoute One users, cheap calls to landlines and mobiles, as well as a single phone number for all devices to receive inbound calls. The first option integrates with Microsoft Live Communications Server, while the second option, comes with an alternative Soft Phone for companies who don't use Microsoft's Live Communications Server.

The option of SIP trunking or ISDN is also available for businesses who want to connect directly to their PBX but don't want to incur the cost and hassle of having to upgrade their equipment.

Why choose Interoute One?

Interoute One is the first genuinely secure corporate VoIP service and we've made it quick and easy for your business to implement it.

Other VoIP services present a serious risk to corporate security. In effect, the user is in control and the IT department can do little or nothing to manage the traffic that runs across the corporate network, making virus control impossible. For many businesses that isn't a risk worth taking.

Interoute One is run through your systems and managed by your IT department, so it doesn't breach your security protocols and can be easily tracked and monitored.

Security assured, the appeal of Interoute One is the low cost and increased functionality that comes with VoIP and unified communications. All calls to your business community are free and other calls are extremely competitive.

Become part of a global business community

If you have Microsoft Exchange and Live Communications Server (LCS), you can become part of the world's biggest business community. We've worked closely with Microsoft to enable what they refer to as "federation". The Interoute One VoIP platform acts as an intelligent bridge connecting different businesses around the world. As a result, each business only has to federate once to Interoute One rather than create bilateral agreements with each individual company they connect to.

You don't have to upgrade your PBX to use Interoute One

Integrating Interoute One into your network is easy, because the intelligence is held in our network. You can use your existing office infrastructure no matter how old your equipment is or whether your corporate network is MPLS-ready or not. So you can benefit from the advantages of VoIP without having to overhaul your existing technology, saving you time and money.

Testing the service is simple

It only takes 10 minutes to register at www.interouteone.com and your business is ready to go. It can then communicate directly with other companies and the PSTN.

Benefits at a glance

No expensive upgrades required – you can keep your existing infrastructure /corporate network and your PBX.

Free calls – make free calls to your business community.

Security – use a safe and secure product, not one that gives your Security Manager nightmares.

Out of office workers – provide your staff with the same technology as they have in the office when they're away from it, including their business phone.

Roaming – secure and safe roaming for all employees to significantly reduce your Mobile expenses.

Create your own business community – it's simple to add other businesses to your community and when they sign up, you'll be able to communicate with them for free.

Business-class quality calls – we can assure the call quality because we own and operate Europe's most advanced network. It spans 53,000 km and is interconnected to regional operators in North America, Asia and across the globe.

Accountability – managed by your IT team, all calls and users can be monitored and tracked by you.

Features at a glance

Microsoft LCS Integration – if you have LCS then connect to Interoute One to use the communicator functions to their full potential (IM, Video, Calls, Presence) enabling you to call other businesses and the PSTN.

Soft Phone – deploy our Interoute One Soft Phone if you do not have LCS.

Free Trial – sign up online to trial the service and be up and working in minutes.

Receive and make calls.

Follow me – using our One Number technology, your employees can personalise how and where they want to be called.

Easy to manage – you can control, monitor and access your entire voice service from one web page.

Make the most of your existing investment – no additional hardware costs (e.g. no need to purchase new phones, gateways, PBX's etc.) or complex integration costs.

Any technology access

Dedicated TDM Access – VoIP can be accessed by a traditional PBX using Q931 or C7.

Converged Access using IP-VPN – VoIP is readily accessed by customers already using an IP Virtual Private Network for their data or via the public Internet.

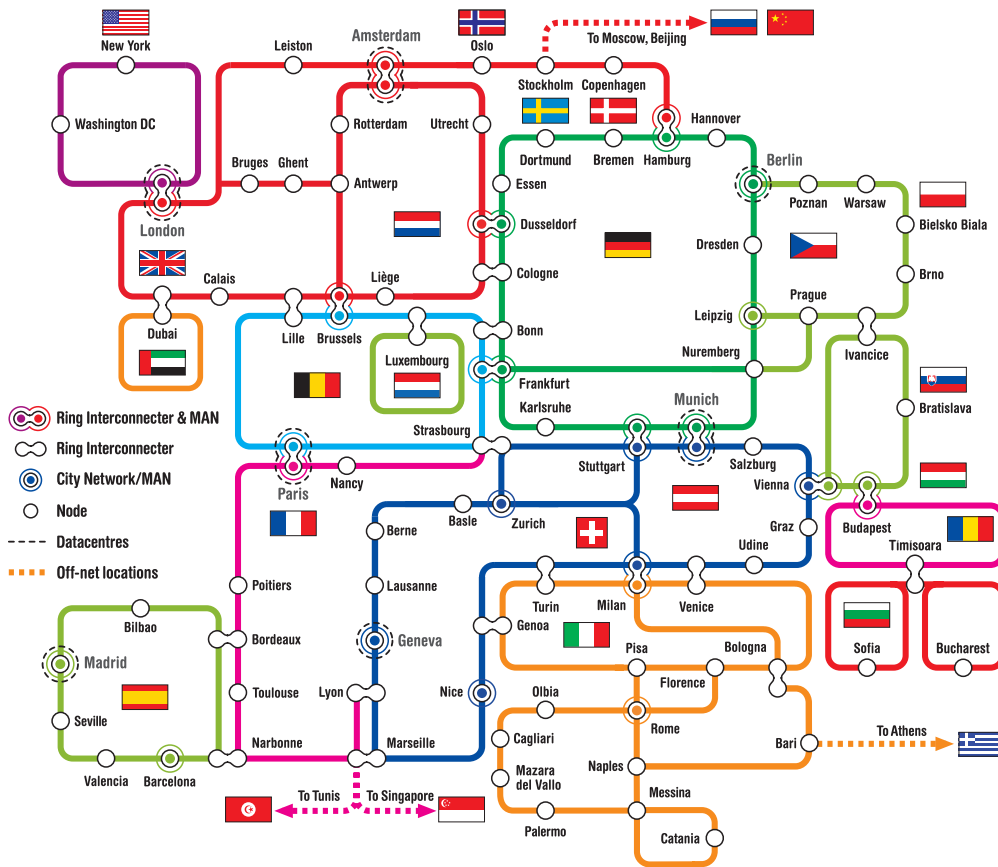

Indirect Access – access using a carrier code, programmed into the PBX, over existing PSTN lines.

SIP or H323 – globalise your IP telephony deployment by connecting it to the largest number of destinations in the world.

Try Interoute One for free

If your company would like to save money and make the most of true converged communications, then Interoute One is the service for you. You don't need new hardware or to change your PBX and there's no obligation to buy. Just register at www.interouteone.com to try it for free today.
