**Interoute
voice
services**

*PoPs

The highest quality voice services from the densest network in Europe.

Sound interesting?

Utilising 3rd generation fixed voice networking we bring you Europe's densest most advanced network with its comprehensive range of options. Select from Classic Voice (using directly connected National PTS, Mobile and International carriers) Advanced Inbound Services (including number translation and Freephone services) and Voice Virtual Private Networks that utilise the Interoute MPLS IP-VPN platform.

We use the latest switching technology to tailor routing to your preferences and benchmark our call quality and clarity against the QSDG's standards. Technical interconnection is also simple – direct connection with your company's switch or PABX can be via C7, PRI or VoIP. Indirect access is also available for remote sites. Interoute's use of open programmable standards mean easier integration of applications, including interfaces for web portals and on line reporting.

Above all we'll save you money. Classic Voice gives average savings of 55% compared to BT International Call charges.

And because we are constantly innovating, you can soon enjoy additional benefits such as Mixed Media Conferencing.

*H.323
SIP fully
supported
